

PRODUCT INFORMATION

C2201RX furnishes high yields, super standability and great defense. A moderate sized canopy that is an attractive golden tawny at harvest.

- Superior agronomic features and top-end yield potential.
- Medium height plants have a moderate width canopy and an attractive golden tawny appearance at harvest.
- Two genes for resistance to Phytophthora Root Rot, with a great defensive package against IDC, SDS, BSR, and SCN.
- Widely adapted in the western Corn Belt, across the early Group II zone.

MANAGEMENT TIPS

Adapts well into no-till and minimum tillage. Handles varying soil and fertility situations. Exceptional stress and drought tolerance.

PLANT CHARACTERISTICS

	1	2	3	4	5	6	7	8	9
Emergence	█	█	█	█	█	█	█	█	█
Standability	█	█	█	█	█	█	█	█	█
Shatter Resistance	█	█	█	█	█	█	█	█	█
Plant Height									M
Plant Type									M
Pubescence									Tawny
Flower Color									White
Hilum									Black
Pod Color									Tan

MANAGEMENT PRACTICES

GDUs are estimates based on observations and are to provide guidelines for area adaptation. Performance may vary from location to location and from year to year, as local growing, soil and weather conditions may vary. Growers should evaluate data from multiple locations and years whenever possible and should consider the impacts of these conditions on the grower's fields. Preferred Placement Zones represent the best areas of adaptation for a product based on in-field observations, genetic background, and trial data. Products may fit within only a portion of a zone, and products may perform well in other areas not identified. Contact your sales team for details.
